Apple Technologies Partnership

Technology Education Collaboration

Skyline College's Career and Workforce programs along with key faculty of the Computer Science and Digital Arts programs formed a responsive and innovative partnership with Apple Technologies and began offering Apple's newly created app development curriculum as part of computer science pathways. "App Development with Swift" is a series of curriculum modules and resources designed for students who want to pursue careers in the fast-growing app economy. Skyline College is one of six community colleges—and the only one in California—to offer the curriculum.

App Development with Swift is curriculum designed by Apple to teach students elements of app design using Swift, which is a popular programming language for building apps for Apple devices. Students will learn to code and design fully functional apps, gaining critical job skills in software and app development, information technology and object-oriented program design.
