Sterile Processing Technology
Program Lottery

If more applications are received than seats in the program, a Lottery Protocol is followed to randomly select a cohort and waitlist. The waitlisted applicants will be contacted if an admitted student doesn't complete the program requirements or chooses to not enroll in the program. In the Sterile Processing Technology program, around 25 applicants will be admitted to each cohort, with around 30 applicants placed on a waitlist. This number may vary from cohort to cohort.

Lottery Protocol

Pool A: Applicants who did not get accepted from Pool B the previous year move to Pool A. A Pool A applicant will receive two entries into the lottery, +1 additional entry for each consecutive reapplication.

Pool B: New applicants with a completed application.

Please Note

Applications are only kept on file for one application cycle. If you do not reapply the following cycle, a new, complete application will be required.
