

Sterile Processing Technology Program Lottery

If more applications are received than seats in the program, a Lottery Protocol is followed to randomly select a cohort and waitlist. The waitlisted applicants will be contacted if an admitted student doesn't complete the program requirements or chooses to not enroll in the program. In the Sterile Processing Technology program, around 25 applicants will be admitted to each cohort, with around 15 applicants placed on a waitlist. This number may vary from cohort to cohort.

Lottery Protocol

Pool A: Applicants who did not get accepted from Pool B the previous year move to Pool A. A Pool A applicant will receive two entries into the lottery, +1 additional entry for each annual reapplication.

Pool B: New applicants with a completed application.

Please Note

Applications are only kept on file for one year. If you do not reapply the following year, a new, complete application will be required.

Sterile Processing Technology (Certificate) Application Dates: April 10 – July 10
